NEW BOOKS

Of the approximately 200 new books received by the Army Medical Library each month a few are being chosen, more or less at random, for brief mention here.

ADOLPH, EDWARD. Physiological regulations. Lancaster, The Jacques Cattell press, 1943, 502p.

This volume reports the experimental work of the author on the maintenance of specific properties of the organism. It describes the interrelations among a limited number of rather familiar facts, principally those concerned with the regulation of the water content of the body. The experimental facts are given in detail and a concluding section summarizes the result of each subdivision of the work.

DANKS, A.G. Williams' surgical operations ... with the collaboration of James M. Frost. Ithaca, N.Y., Published by the author, 1943, 140p.

This treatise on veterinary surgery is a revision of the book "Surgical and obstetrical operations" by W.L. Williams. The modus operandi is given without reference to etiology, diagnosis, or after care. It is designed primarily as a manual for students in laboratory surgery.

JONES, FREDERIC WOOD. Habit and heritage. London, Kegan Paul, Trench, Trubner & co., Ltd. /1943/ 100p.

Evidence in support of the thesis of the inheritance of acquired characters is discussed in this series of lectures and an attempt made to enlarge our views as to the possibility of evolutionary change. Examples are cited of simple happenings in the story of animal structure and function, in which the inheritance of acquired characters seems to be clearly demonstrated.

LIVINGSTON, W.K. Pain mechanism, a physiologic interpretation of causalgia and its related states. New York, The Macmillan co., 1943, 253p.

The central theme of this monograph is the further development of the ideas formulated by Weir Mitchell or "causalgia" and "reflex paralysis" in cases of injuries to peripheral nerves. The reality of the phantom limb phenomenon is illustrated by typical cases and answers sought to the manner of its relief by injections of local anesthetics. Definite convictions are arrived at on only a few of the many questions which present themselves.

PAPANICOLAOU, GEORGE N. & HERBERT F. TRAUT. Diagnosis of uterine cancer by vaginal smear. New York, The Commonwealth Fund, 1943, 46p., plates.

This monograph records the progress which has been made in recognizing the intimate changes within the cells produced by malignant disease. The atypical architecture caused by malignancy in the individual cell makes possible the diagnosis of the pre-invasive stage of cancer and has made cancer recognizable in locations apart from its origin. The vaginal smear method is described and illustrated by a series of eleven colored plates and photomicrographs. The evidence obtained by this method has been correlated with that of clinical and operative procedures in more than three thousand cases and shows that this procedure offers a distinct advance in the field of diagnosis.

TALBOTT, JOHN H. Gout, edited by Henry A. Christian. New York /etc./ Oxford university press /1943/ 134p.

Of the cases coming to arthritic clinics about five per cent are in the advanced stages of gout. An accurate description of clinical gout is given and a comprehensive discussion of all phases of the disease along with the presentation of the results of clinical and laboratory researches.

TITMUSS, RICHARD & KATHLEEN. Parents revolt; a study of the declining birth-rate in acquisitive societies. London, Secker and Warburg, 1942, 125p.

An answer is sought to the cause of the falling birth rate. The problem is discussed from the point of view of the social and economic background. It is shown that population, the war and human poverty are linked one to another. A solution of the population problem contains within itself the right solution to the problem of war and of poverty.

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at \$1.00 per year.
